Itemize and Enumerate

Itemize produces bulleted lists. Enumerate produces numbered lists. The maximum "depth" of either is 3.

1. First ordered point
2. Second ordered point
   2.1 Enumerate lists also carry over their order to sublists
      - This point has a "depth" of 3
      - You can also mix and match!
      - But as you can see, itemize is for unordered (bulleted) lists

Blocks

Sometimes it is useful to highlight a particular fact or definition with a block!

Blocks in LaTeX

Doesn't this look nice?

Not all blocks are exactly the same...

Blocks automatically change shape too!

First line
Second line
Third line!
